Table of contents

Companion Website: Architecture & Quiz Strategy

Website Technology Stack

Recommendation: HTML + Quarto Hybrid (NOT Pure Quarto)

Why?

- **Quarto alone:** Academic look, limited design control
- **Pure HTML:** Too much manual work for content updates
- **Hybrid:** Best of both—professional design + easy content management

How It Works

1. Quarto renders markdown → plain HTML content (no styling)
2. Custom HTML templates & CSS create professional look
3. JavaScript handles interactivity (navigation, quiz logic)
4. Result: Polished site that's easy to maintain

File Structure (After Reorganization)

```
website/                                # SOURCE files
  src/
     index.html                    # Landing page (cards, nav)
     templates/
        page-template.html        # Wrapper for all pages
        quiz-results.html         # Quiz results display
     css/
        style.css                 # Professional theme
     js/
        nav.js                    # Navigation logic
        quiz.js                   # Quiz engine + routing
        utils.js                  # Helpers
     images/
         logo.png
         favicon.ico
         icons/

  content/                            # Markdown source files
     resources/                      # (renamed from pre-readings)
        what-to-expect.md
        quick-start-guide.md
        what-is-ai.md
        what-are-llms.md
        ai-in-pedagogical-design-and-delivery.md
        cognitive-prompting-in-education.md
        using-ai-in-education.md

     materials/
        presentation.md
        handout-ai-tools.md
        handout-teaching-strategies.md
        references.md

     assessment/
         ai-literacy-quiz.html    # Interactive quiz (custom)

  _quarto.yml                         # Minimal Quarto config (just render settings)
  build.sh                            # Build script
  README.md                           # How to build locally
```

```
docs/                              # OUTPUT (GitHub Pages)
  index.html                       # (generated)
  resources/
     what-to-expect.html
     quick-start-guide.html
     ...
  materials/
     presentation.html
     presentation.pdf
     ...
  assessment/
     ai-literacy-quiz.html
  css/
     style.css
  js/
     quiz.js
  images/
```

Two-Phase Assessment Strategy

PHASE 1: Reflective Profile (Week Before)

What it is: Quick self-assessment to surface anxieties & motivations
When: Sent 1 week before workshop via email link
Duration: 8-10 minutes
Purpose: Help YOU understand audience, help them frame learning

Questions (10 items):

Mindset & Comfort (3 Qs) - "I feel confident trying new technology" - "AI will fundamentally change my teaching" - "Learning AI will take time I don't have"

Anxiety Signals (4 Qs) - "Students using AI is cheating" - "AI will replace teachers" - "AI will make my expertise less valuable" - "AI outputs are too unreliable"

Values (3 Qs) - "What do you value most?" (knowledge / critical thinking / human connection / practical skills) - "Biggest concern about AI?" (open text) - "What do you want to learn?" (open text)

Output: Not a score, but a **reflective profile**

```
YOUR REFLECTIVE PROFILE

Confidence: [    ] (Cautious)

You're in the "Thoughtful Skeptic" group:
  Interested in AI but concerned about implications
  Values human connection highly
  Worried about workload

What we'll emphasize:
• How AI enhances (not replaces) teaching
• Time-saving, not time-adding
• Keeping the human element central
• Ethical frameworks

Pre-reading suggestion:
→ what-is-ai.md (builds understanding)
→ quick-start-guide.md (practical)
```

Implementation: Google Form or Typeform (embedded on website) - Free, simple, auto-emails results - Optional: aggregate responses show you patterns

---

PHASE 2: Diagnostic Quiz (During Workshop)

What it is: Interactive assessment measuring current AI literacy
When: First 15 minutes of workshop (or on arrival)
Duration: 12-15 minutes
Purpose: Personalize workshop recommendations in real-time

Structure (15 questions):

Knowledge: What AI Can/Can't Do (5 Qs) - Multiple choice questions testing understanding of capabilities - Scenarios: "AI gave you X answer, what's the problem?" - Examples: hallucinations, outdated knowledge, bias

Skills: Prompting & Critique (5 Qs) - "Which prompt is better?" (compare two) - "What's wrong with this AI output?" (identify issues) - Practical scenarios they'll see in workshop

Attitudes: Concerns & Priorities (5 Qs) - "What concerns you most?" (academic integrity / connection / bias / privacy) - Likert-scale: "I'm worried AI will replace my job" - Open-ended: What do you hope to learn?

Instant Results → Adaptive Guidance:

```
YOUR AI-LITERACY PROFILE

Knowledge:          40% (Developing)
Prompting:          30% (Novice)
Confidence:         70% (Good!)

PERSONALIZED WORKSHOP PATH:

Activity 1 (Automate the Tedious):
→ YOU: Essential foundation - we'll start here

Activity 2 (Art of the Prompt - CRAFT):
→ YOU: This is where you'll get big wins - lean in!

Activity 3 (5-Step Critique):
→ YOU: Critical skill for you - spend extra time here

Activity 4 (Assessment Stress-Test):
→ YOU: Your concern about cheating will be addressed

Pre-reading focus:
1. what-are-llms.md (understand limitations)
2. teaching-strategies-handout.md (your human-connection concern)

Questions? You're in "Developing Knowledge" group - facilitators will
provide extra support. Raise your hand anytime!
```

Implementation: Custom HTML/JavaScript quiz - Runs entirely in browser (no backend needed) - Instant results with guidance text - Can export results to CSV for your records

---

Integration Timeline

1 Week Before Workshop

- Email: Reflective Profile link + info sheet

- Participant completes (8 min)
- Receives personalized profile + reading suggestions
- They choose what to read based on their results

Day Of (First 15 minutes)

1. Participants arrive, access Diagnostic Quiz (via link/laptop)
2. Complete quiz (12-15 min)
3. Get instant personalized guidance card
4. Facilitator can adjust pacing/emphasis based on aggregate results

During Workshop

- Facilitator references groups: "Novices, Activity 1 builds your foundation…"
- Adaptive timing: If group scores low on prompting, spend more time on CRAFT

After Workshop

- Results + facilitator notes emailed to each participant
- Recommended "next steps" reading
- Link to practice resources

Technology Choices

Reflective Profile (Week Before)

Option 1: Google Form (Easiest) - Free, auto-emails results - Basic design but functional - No backend needed

Option 2: Typeform (Better UX) - Professional look - Better user experience - Free tier allows ~10 questions - Can auto-email personalized results

Diagnostic Quiz (During Workshop)

Custom HTML/JavaScript (Best Control) - Runs offline (no internet dependency during workshop) - Instant results, personalized guidance - Easy to modify questions - Can log results to email or spreadsheet - Professional look (matches your website)

Building Locally

Create `website/build.sh`:

```
#!/bin/bash

# Render markdown to HTML (plain, no styling)
quarto render content/resources/*.md --to html
quarto render content/materials/*.md --to html

# Render presentation to multiple formats
quarto render content/materials/presentation.md --to pptx
quarto render content/materials/presentation.md --to pdf
quarto render content/materials/presentation.md --to html

# Copy everything to docs/
cp -r src/* docs/
cp -r content/resources/* docs/resources/
cp -r content/materials/* docs/materials/
cp -r content/assessment/* docs/assessment/

echo "  Site built to docs/"
echo "  Run: python -m http.server 8000 (then visit http://localhost:8000)"
```

Run locally:

```
cd website
./build.sh
python -m http.server 8000
# Visit http://localhost:8000
```

.gitignore Updates

Keep generated files in `docs/` so GitHub Pages works:

```
# Quarto build artifacts (don't commit)
/.quarto/
*_files/
*_cache/

# But DO commit docs/ output (for GitHub Pages)
!docs/
!docs/**/*.html
!docs/**/*.pdf
!docs/**/*.css
!docs/**/*.js
!docs/**/*.json

# Don't commit temp build files
website/.build/
website/*.tmp
```

Next Steps

1. **Decide on quiz approach:**
   - Use Google Form for Reflective? (simpler)
   - Build custom HTML for Diagnostic? (more control)
2. **Choose landing page style:**
   - Cards + navigation (modern)
   - Timeline/process flow (storytelling)
   - Simple nav + featured resources (minimal)
3. **Start with file structure:**
   - Rename `pre-readings/` → `resources/`
   - Create `website/src/`, `website/content/` folders
   - Move relevant files
4. **Create minimal HTML template** (I can draft)

Would you like me to start building the custom HTML template, or do you want to finalize the structure first?
