

Instructor Notes – Activity 5: Secure, Safe, and Sustainable AI

Overview

Purpose: End the workshop with **one small, realistic commitment** about how participants will use (and talk about) AI in their own unit, project, or role.

This activity assumes that some ethics/privacy/Assessment 2030 content may already have been covered earlier in the day. The focus here is **practical next steps**, not another long ethics lecture.

Quick Framing (2–3 minutes)

Slide idea: “Secure, Safe, Sustainable AI – Why it matters”

Key points:

- We now have **enterprise Copilot** (data protection) and tools like **Turnitin Clarity**.
- Security safety good pedagogy.
- We still need simple, explicit norms for:
 - How *we* use AI in teaching/research/work.
 - What we ask / allow from *students*.
 - How this aligns with **Assessment 2030** (human irreplaceability).

Talking line:

“The tools give us guardrails, but they don’t make decisions for us. This activity is about **one small, concrete step** you can take in your own unit or role.”

Option A – Full Micro-Task (10–15 minutes)

Use this when people still have energy to work directly with AI.

Step 1 – Choose ONE micro-task

Ask them to pick whichever is most useful right now:

1. Draft a short “**AI use in this unit/team**” guideline.
2. Run a **risk/benefit check** on one planned AI use.
3. Draft a **Week-1 statement** to say to students/staff about AI.

They can do this **with AI** (using the prompts below) or just write by hand.

Option 1 – Unit/Team AI Use Guideline

Prompt template:

You are advising educators / professional staff at an Australian university on safe use of generative AI tools (e.g., Microsoft Copilot).

Draft a short “**AI use in this unit/team**” guideline.

Include:

- 3–4 “**Do**” points (good use cases)
 - 3–4 “**Don’t**” points (e.g., student data, confidential documents, unacknowledged AI use)
 - A one-sentence reminder to check institutional policy.
- Keep it under **200 words** and use plain language.

Ask them to **edit** the output so it fits their tone and local policy.

Option 2 – Risk/Benefit Check for One Planned AI Use

Prompt template:

You are an AI risk advisor.

I plan to use AI in this way in my work:

[describe intended use, e.g., "Use Copilot to draft weekly announcements and example feedback comments"].

Identify:

- Key benefits for my workload and for students/staff.
- Main risks (privacy, bias, over-reliance, academic integrity, misinformation).
- 3 practical safeguards I should put in place to manage these risks in line with typical Australian university policies.

They then decide which benefits/risks/safeguards **actually apply** for them.

Option 3 – Week-1 Statement for Students or Staff

Prompt template:

You are helping me frame AI use in my [unit / team / project] in a way that supports “**human irreplaceability**” (e.g., Assessment 2030).

Suggest **3 short statements** I can say in Week 1 that:

- Acknowledge that AI tools exist and can be helpful.
 - Emphasise that people’s unique value is in their judgement, experience, and context.
 - Encourage **transparent, responsible use**, not hidden or over-reliant use.
- Keep each statement under **40 words** and use friendly, clear language.

They choose one they like and then **rewrite it in their own voice**.

Option B – Light Version (5–7 minutes)

Use this when there has already been a **heavy ethics/policy session** and energy is low. No AI required.

Step 1 – Draft ONE Clear Sentence

Ask them to write **one sentence** they could say in Week 1 about AI use in their context. For example:

- To students in a unit they teach.
- To HDR students in a research group.
- To staff they support in a professional service.

The sentence should:

- Acknowledge that AI tools exist.
- Emphasise that **human judgement/learning** still matters.
- Indicate what is **allowed/expected** in their context.

Examples they can adapt:

- “You are welcome to use AI tools to brainstorm and draft ideas in this unit, but you are responsible for **checking accuracy** and making the final decisions.”
- “AI can help with first drafts and summaries, but your unique value is in your judgement, experience, and ability to **improve** on those drafts.”
- “If you use AI for your work, be **transparent**: tell me what you used it for and what you changed.”

Step 2 – Optional Share

If time allows, invite a few volunteers to share their sentences. Highlight different ways people balance **openness, trust, and integrity**.

Micro-Debrief & Close (2–3 minutes)

Invite 2–3 quick contributions:

- One “Do/Don’t” they like.
- One safeguard they’ll apply.
- One sentence for students/staff that resonates.

Closing line:

- “If you leave with just one thing from Activity 5, let it be:
- a **clear sentence** to your students or colleagues about AI, or
 - a **small guideline** in your outline, or
 - a **safeguard** around a planned AI use.

Tools like Copilot and Turnitin Clarity are helpful, but it’s these small, explicit choices that make AI use secure, safe, and sustainable in our context.”

This lands the **balanced approach** without turning the end of the workshop into another long policy talk.
