

Website Build Instructions

This directory contains the source files for the companion website.

Structure

```
website/  
  src/                # Static HTML, CSS, JS, images  
  content/            # Markdown source files  
    resources/        # Pre-reading materials  
    materials/        # Presentation, handouts, references  
    assessment/       # Quiz HTML/JS  
  _quarto.yml         # Quarto render config
```

Building Locally

Prerequisites

- [Quarto](#) installed
- Python 3 (for local server)

Steps

1. Render markdown to HTML:

```
cd website  
quarto render
```

2. Preview locally:

```
python -m http.server 8000  
# Visit http://localhost:8000/docs
```

3. Build presentation in multiple formats:

```
quarto render content/materials/presentation.qmd --to pptx  
quarto render content/materials/presentation.qmd --to pdf  
quarto render content/materials/presentation.qmd --to html
```

Output

All rendered files go to ../docs/ (GitHub Pages root)

Deployment

Push to GitHub:

```
git add .  
git commit -m "Update website content"  
git push origin main
```

GitHub Pages automatically deploys from the docs/ folder.
