

Source Mapping – Slides and References

Slide → Reference Mapping (Pre-Activity Slides)

Slide	Main ideas in presenter notes	Likely supporting references
Welcome & The AI Landscape	Bloom’s 2-sigma result (one-to-one tutoring vs classroom); modern claim that AI tutors/assistants might approximate this effect at scale; question of what that means for design/assessment at Curtin.	Bloom (1984); Sal Khan TED <i>How AI Could Save (Not Destroy) Education</i> (not in refs); Artificial Analysis (2025); Noroozi et al. (2025); Pireci Sejdiu & Sejdiu (2025).
Intelligent Tutoring Systems (ITS)	Four-component ITS architecture (Domain, Learner, Tutoring, UI models); ITS as personalised, one-to-one instruction; analogy of ITS as personal trainer that adapts pace/difficulty in real time.	Park University (2025); Li et al. (2025); Budiman et al. (2025); Kwak (2025); Chen (2025).
The Architect (Pedagogical Design)	AI shifts designers from manual content creators to “Strategic Architects” by automating outlines, assessments, multimedia; designers focus on flexible frameworks and human-centric design.	Rojas (2025); Pireci Sejdiu & Sejdiu (2025); Noroozi et al. (2025); Sabzalieva & Valentini (2023).

Slide	Main ideas in presenter notes	Likely supporting references
The Practitioner (Pedagogical Delivery)	AI as co-pilot; real-time data insights; teacher as real-time interventionist rather than content broadcaster; focus on high-value, empathetic interactions.	Noroozi et al. (2025); Pireci Sejdiu & Sejdiu (2025); Li et al. (2025); Budiman et al. (2025); Kwak (2025); Chen (2025); TEQSA (2025); University Canada West (2025).
Challenges & Limitations	Erosion of the human element; paradox of connection; bias and inequity; hallucinations; misinformation/deepfakes; easier to circumvent traditional assessments; need for redesign and guardrails, not bans.	Noroozi et al. (2025); Yin et al. (2025); Dwivedi et al. (2023); Gerlich (2025); Kosmyna et al. (2025); EDUCAUSE (2025); TEQSA (2025); Russell Group (2023); University Canada West (2025); Shackell (2025).
The Evolving Role of the Educator	“Forced re-humanisation” of the educator’s role; AI automates low-level tasks; educators move to empathy, creativity, mentoring, socio-emotional support and ethical reasoning.	Noroozi et al. (2025); Pireci Sejdiu & Sejdiu (2025); Sabzalieva & Valentini (2023); Rojas (2025); TEQSA (2025); Russell Group (2023).

Note: This mapping is reconstructed from the slide notes and reference list; it is approximate but sufficient for pointing people to the right sources.

Reference → Slide Mapping (Key Sources)

Reference	Main slide(s) / themes
Bloom (1984) – 2 Sigma Problem	Welcome & The AI Landscape (opening hook: one-to-one tutoring vs classroom); general framing of “what are we trying to approximate with AI?”.

Reference	Main slide(s) / themes
Sal Khan TED (2023) – <i>How AI Could Save (Not Destroy) Education</i>	Welcome (claim that AI tutors/assistants might help achieve 2-sigma-like effects at scale; idea of tutor for every student and assistant for every teacher).
Park University (2025) – AI in Education: The Rise of ITS	Intelligent Tutoring Systems (ITS) slide; baseline explanation of ITS and benefits.
Li et al. (2025) – Meta-analysis of AI-based teaching	ITS slide (effectiveness of AI-mediated instruction); Practitioner slide (evidence that AI can support improved outcomes).
Budiman et al. (2025); Kwak (2025); Chen (2025) – AI-driven/personalised learning effectiveness	Support claims on ITS and Practitioner slides about AI improving learning outcomes compared to traditional methods.
Rojas (2025) – Future of Instructional Design in the AI Era	Architect slide (role shift from content producer to strategic designer); Evolving Role slide (designers/educators focusing on higher-order work).
Noroozi et al. (2025) – AI in Higher Education: impact depends on support, pedagogy, human agency and purpose	Welcome framing (what AI can/can't do without pedagogy); Practitioner (human agency, real-time intervention); Challenges (conditions for positive impact); Evolving Role (human edge).
Pireci Sejdiu & Sejdiu (2025) – Quiet Transformation of HE in the AI Era	Architect and Practitioner slides (system-wide transformation); Evolving Role slide (changing academic roles).
Artificial Analysis (2025) – State of AI report	Welcome/context (broader AI landscape, adoption, industry impact).
Dwivedi et al. (2023) – “So What If ChatGPT Wrote It?”	Challenges & Limitations (opportunities vs misuse, integrity, policy gaps); informs balanced stance.
Gerlich (2025) – AI tools, cognitive offloading & critical thinking	Challenges slide (cognitive offloading concern); Activity 1 & 3 narrative about cognitive debt and human-in-the-loop critique.
Kosmyna et al. (2025) – Your Brain on ChatGPT (cognitive debt)	Challenges slide and Activity 3 (framing of cognitive debt in AI-assisted writing).
Yin et al. (2025) – FairAIED	Challenges slide (fairness, bias and ethics in educational AI; Automated Factory analogy).
EDUCAUSE (2025); TEQSA (2025); Russell Group (2023) – AI principles and guidance	Challenges & Limitations (guardrails, ethics, institutional responses); Activity 5 (safe/sustainable AI use).

Reference	Main slide(s) / themes
Sabzalieva & Valentini (2023) – UNESCO Quick Start Guide	Architect/Evolving Role slides; general guidance on integrating generative AI into HE; informs Assessment 2030 narrative.
University Canada West (2025) – Advantages and Disadvantages of AI in Education	Practitioner and Challenges slides (advantages vs disadvantages framing; teacher/learner impact).
Shackell (2025) – “Grey Swan” risks	Challenges slide (systemic risk language; possibility of disruptive events in AI).

This file is intended as a **private mapping** for you and other facilitators when you need to point colleagues to the underlying literature.
